(THIS TEST REPORT IS VALID UPTO 31/08/2023)

The "GROMAX, TRAKSTAR 531" tractor was submitted for "Initial Commercial Test" at The "GROMAX, TRAKSTAR 531" tractor was submitted to the applicant i.e. M/s. this Institute. Subsequently, the Institute had received an application from the applicant i.e. M/s. unis Institute. Subsequently, the Institute had received an application of the incorporating the Gromax Agri Equipment Limited, vide letter no. nil dated 21.11.2019 for incorporating the following t following modification on the said tractor model on establishment of the fourth revision of IS: 12207-2019 form 25th July, 2019 and requested to evaluate the performance results of the said tractor as per IS: 12207-2019. Langeification

S.No.	Parameters /fitments	Re-declared /modified specification
1.	Fitment of front towing hook	Punching will be done on labelling plate as pe
2.		IS:12207-2019

Manufacturer

: M/s. Gromax Agri Equipment Limited Vishwamitri Railway Over Near

Vishwamitri, Vadodara Bridge,

390011 (Gujarat)

Test requested by (applicant)

The manufacturer Applicant

Selected for test by Place of running-in

Method of Selection

At manufacturer's works

Duration of said running-in (h):

15

- Engine - Transmission

30 The tractor was submitted directly by the

applicant for test. Hence, method of

selection is not known.

1. SPECIFICATIONS

1.1 Tractor:

Make

Gromax

Model

Trakstar 531

Brand name

: Trakstar

Type

: Four wheeled, Rear wheel drive, Unit construction, General purpose.

Agricultural tractor.

Month & Year of manufacture

: 05 & 17

Chassis number

M9KATAAAAHVB00005

Country of Origin

: India

1.2 Engine:

Make

: Mahindra & Mahindra

Model

: GTS2231NA3A

Type

: Four stroke, naturally aspirated, liquid

cooled, direct injection, diesel engine

Serial number

: NHM6RBE0008

Engine speed (Manufacturer's recommended production setting), (rpm):

Maximum speed at no load

: 2325 to 2525

- Low idle speed

: 750 to 850

Speed at maximum torque

: 1200 to 1500

Rated speed, (rpm):

- For PTO use

2200 2200

- For drawbar use

CENTRAL FARM MACHINERY TRAINING & TESTING INSTITUTE - BUDNI

Page 5 of 51

GROMAX, TRAKSTAR 531 TRACTOR - Commercial (Initial)

(THIS TEST REPORT IS VALID UPTO 31/08/2023)

1	2 avertoading
	During the field test with rotavator (Farmking make, 30 blades), the overloading (dropping of engine speed) was observed & engine speed dropped from 2420 rpm to 1400 rpm.
	Upon the request of applicant, the rotavator (Farmking make, 30 blades) was replaced with rotavator (Tafe make, 30 blades). Again the overloading (dropping of engine speed) was observed & engine speed dropped from 2417 rpm to 900 rpm. The problem of engine stalling was not rectified.
	The problem of engine stalling was not rectified. Subsequent to this, the firm has again requested for replacement of rotavator (Farmking make, 30 blades) existing gear pair (17/18 teeth) with new gear pair (16/19 (16/19 teeth). The gear pair of rotavator was replaced with new gear pair (16/19 teeth). Again the overloading (dropping of engine speed) was observed & engine speed dropped from 2450 rpm to 1400 rpm. The problem of engine stalling was not rectified.
	not rectified. Upon this the applicant vide letter dated 18.05.2020 has requested to complete the field test with rotavator with 24 Nos. of blades in place of 30 Nos. blades. Accordingly, the field test with rotavator (Trakmate make, 24 blades) was conducted & test results have been reported in Chapter-13 of this report.

17. SUMMARY OF OBSERVATIONS, COMMENTS & RECOMMENDATIONS

On the basis of test conducted the performance results have been summarized as evaluative (mandatory) / Non-evaluation (Non-mandatory) parameter applicable for 17.1 qualifying Minimum Performance criteria as per Clause-4 (Table-1) of Indian standard: 12207-2019 for acceptance of the tractor for the purpose of subsidies/NABARD financing are summarized as under:

3	are summarized as u	inder:		Values		Whether
SI. No.	Characteristic	Category (Evaluative / Non Evaluative)	Requirements as per IS: 12207-2019	declared by the applicant (D)/ Requirement	As observed	require- ments (Yes/No
				(R) 5	6	7
1	2	3	4			
17.1.1	PTO Performance		Declared value to be		2012/03/05	Yatation
a)	Maximum power under 2 h test, (kW) (Natural ambient condition)	Evaluative	Declared value to be achieved with a tolerance of: ± 5 % for PTO power and or Engine power >26 kW. ±10% for PTO power and or engine ≤ 26 kW	20.5 (D)	19.6	Yes
b)	Power at rated engine speed, (kW)	Non Evaluative	-do-	20.5 (D)	19.6	Yes
c)	Specific fuel consumption corresponding to maximum power,	Evaluative	+ 10% maximum	258 (D)	253	Yes

CENTRAL FARM MACHINERY TRAINING & TESTING INSTITUTE - BUDNI

Page 45 of 51

17.4 Salient Observations:

17.4.1 Laboratory tests:

17.4.1.1 PTO Performance:

- The maximum PTO power was observed as 19.6 kW against the declaration of 20.5 kW, which meets the requirement of IS: 12207-2019 with regard to tolerance limit
- ii) The drop in maximum PTO power of 5.6 % was observed during natural to high ambient conditions. This should be looked into for necessary corrective action.
- The specific fuel consumption corresponding to maximum power was recorded as 253 g/kWh against the declaration of 258 g/kWh, which meets the requirement of IS: 12207-2019 with regard to tolerance limit.
- iv) The backup torque is 32.5 %, which meets the evaluative requirement of IS: 12207-2019.

17.4.1.2 Mechanical Vibration:

The amplitude of mechanical vibration on various assemblies marked as (*) in Chapter-9 of this test report is on higher side. This calls for dampening down of vibrations to improve the operational comfort and service life of components.

17.4.1.3 Three point linkage:

Some of the parameters conform to Cat. I and some of them conform to Cat. II. Keeping in view the spirit of standardization, necessary improvement may be incorporated.

17.4.1.4 Operator's Seat:

The width of seat and longitudinal distance from seat index point to centre of steering control wheel does not meet the requirement of IS: 12343-1998. This should be looked into for necessary corrective action.

17.4.1.5 Operator's work place:

Operator's work place meets the requirements of IS: 12239 (Part-I) 1996 (Reaffirmed Oct., 2017), except the following:

- i) Provision of spark arresting device in the exhaust system.
- ii) Provision of vertical retainers at both sides of clutch and brake pedal.
- iii) Provision of hand holds for easy mounting & dismounting of the operator's.
- iv) Width of foot steps

17.4.1.6 Constructional requirement with regard to safety:

Meets the requirements of IS: 12239 (Part-II)-1996 (Re-affirmed in October, 2017), except the following:

- i) PTO master shield has not been provided.
- Minimum Cautionary notice as per clause 11.2 of above referred standard has not been provided.
- iii) Working clearance in between position control and draft control lever is less than the requirement.

17.4.1.7 Location of operator's controls with regard to safety:

Location of operator's controls with regard to safety meets the requirements of IS: 8133-1983(Reaffirmed 2014), except the following:

- i) Fuel shut-off knob does not remain in stop position.
- ii) Safety against accidently start of engine has not been provided.
- iii) Provision of differential lock in the tractor.

Haulage Test:

lage Test:
The specific fuel consumption in two wheels and four wheels trailer was recorded against to 29.35 ml/km/ton respectively against The specific fuel consumption in two wheels and the specific fuel consumption in two wheels and the specific fuel consumption in two wheels and specific fuel consumption in two wheels are specific f as 32.16 to 32.88 & 29.01 to 29.33 included the requirement of the declaration of 35 to 45 ml/km/ton, which does not meet the requirement of the declaration of 35 to 45 ml/km/ton, which does not meet the requirement of the declaration of 35 to 45 ml/km/ton, which does not be looked into for necessary corrective action.

17.4.2 Field performance test:

d performance test:

During the field test with disc plough, the draft control lever of hydraulic system

During the field test with disc plough, the draft control lever of hydraulic system During the field test with disc plough, the draft countries and system was found not working & hydraulic linkage got stucked during raising & lowering was found not working & hydraulic linkage got stucked during raising & lowering was found not working in the field. During was was found not working & hydraulic linkage got of working in the field. During the of the implement that too only after one hour of working in the field. During the of the implement that too only after one hour of working in the field. During the of the implement that too only after one rious of the implement that the implement inspection, the control valve assembly with ram cylinder (Par was found faulty. Hence, control valve assembly with ram cylinder (Par No.007203023C91) was replaced with new one. This breakdown has been No.007203023C91) was replaced with new one. It is 12207-2019.

The control valve assembly with ram cylinder (Part No.007203023C91) consists

S. No.	Name of Parts	Parts Number
•••	Valve control Assembly(inbuilt with ram cylinder)	007203023C91
	oub rait :	1 001200000
	(i) Cylinder lift hydraulic	005554399R1
	(ii) Piston	73181110 (HSN code
	(iii) Link Roller (iv) Bolt	00050818D01
	(v) Bolt	000179890
	(vi) Washer Spring lock	000179891
	(vii) Plug BSP Tapping Auxiliary	001082014R2
3	(viii) Washer sealing	005558124R1
- [(ix) Bolt needle valve cover	0007043377R1
	(x) Washer	000751580R3
4.2.1	Again during the Salar	003045118R1

17.4.2.1 Again during the field test with disc plough, the draft control lever of hydraulic system was found not working & hydraulic linkage got stucked during raising & lowering of the implement that too only after 2.1 hour of working in the field.

Distributor control valve linkage was checked & found correct.

Sector of position & draft control lever was removed to check the setting &

Transmission oil (common with hydraulic system oil) was checked & refilled iii) Fresh 10 litres of transmission oil was filled to maintain the level of transmission

Upon this, the hydraulic system was checked and found working satisfactorily.

The above breakdowns occurred only after one hour of working in the field and have been considered as premature and this indicates that, the components used are of very poor quality. It is therefore recommended that, the quality of components should be improved and stringent quality control measures should

GROMAX, TRAKSTAR 531 TRACTOR - Commercial (Initial

(THIS TEST REPORT IS VALID UPTO 31/08/2023)

17.4.2.2 During the field test with rotavator (Farmking make, 30 blades), the overloading (dropping of engine speed) was observed & engine speed dropped from 2420 rpm to 1400 rpm.

Upon the request of applicant, the rotavator (Farmking make, 30 blades) was replaced with rotavator (Tafe make, 30 blades). Again the overloading (dropping of engine speed) was observed & engine speed dropped from 2417 rpm to 900 rpm. The problem of engine stalling was not rectified.

Subsequent to this, the firm has again requested for replacement of rotavator (Farmking make, 30 blades) existing gear pair (17/18 teeth) with new gear pair of (16/19 teeth). The gear pair of rotavator was replaced with new gear pair (16/19 teeth). Again the overloading (dropping of engine speed) was observed & engine speed dropped from 2450 rpm to 1400 rpm. The problem of engine stalling was not rectified.

Upon this the applicant vide letter dated 18.05.2020 has requested to complete the field test with rotavator with 24 Nos. of blades in place of 30 Nos. blades. Accordingly, the field test with rotavator (Trakmate make, 24 blades) was conducted & test results have been reported in chapter-13 of this report.

To evaluate the field performance of the tractor with rotavator that too only for 10 hours operation considerable time period of 9 months had lost due to incorrect recommendation of matching implement by the applicant.

Keeping in view the basic function of the tractor that is to perform different field operations smoothly and the matching implement play a very imperative role in such operations. The overall performance of the tractor directly depends on the matching implements. It is therefore recommended that, before recommendation of matching implement for the tractor an exhaustive internal testing should be conducted at R&D level of the manufacturer so that farmers/user's may not face any complexity in operations of the tractor.

17.4.2.3 Wet land cultivation (Puddling operation):

No ingress of water and or mud in various assemblies/components was noticed during wetland cultivation of tractor. Hence, it meets the requirements of IS: 11082-1984 (Technical Requirements of Agricultural Tractors for Wetland Operation). The tractor is found suitable for wetland operation (Puddling).

17.4.3 Maintenance / Service Problems:

No noticeable maintenance or service problem was observed during the test.

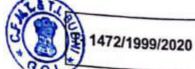

17.5 Recommendation with regard to safety on tractor:

The following requirements, inter-alia, may be considered for incorporation on the tractor:

- Provision for spark arresting device in exhaust system.
- ii) Width of foot step should be provided as per the requirement of relevant Indian Standard.
- Longitudinal distance from seat index point to centre of steering control wheel should be provided as per the requirement of relevant Indian Standard.
- iv) Hand holds for easy mounting and dismounting of operator.
- Vertical retainness at both sides of pedals should be provided as per relevant standard.
- vi) Fuel shut-off knob should remain in "STOP" position
- vi) The working clearance between draft control lever and position control lever should be as per the minimum requirements of relevant Indian Standard for easy operating the lever.
- vii) PTO shaft master shield should be provided to avoid the accident.
- viii) Safety starting switch should be provided as per the requirement of IS: 8133-1983 (Reaffirmed 2014) to avoid accidental starting of engine.
- ix) Symbols of starting switch & engine revolution gauge in colour coding may be provided

CENTRAL FARM MACHINERY TRAINING & TESTING INSTITUTE - BUDNI

Page 48 of 51

(THIS TEST REPORT IS VALID UPTO 31/08/2023)

- x) Lubricating oil frequency chart should be provided on the tractor
- xi) Provision of differential lock in the tractor.
- Adequacy of Literature supplied with machine: 17.6
- Adequacy of Literature supplied with the tractor for reference during the lest 17.6.1
 - Tractor Operator's Manual of Trakstar 531 tractor.
 - Parts Catalogue of Trakstar 531 tractor. ii)
 - iii) Service Manual of Trakstar 531 tractor.
- The printed literature supplied with the test sample is in English. However, the brought out in other vernacular languages of India for guidant The printed literature supplied with the test sample to the printed literature should be brought out in other vernacular languages of India for guidance 17.6.2
