16.4 Salient Observations:

16.4.1 Laboratory tests:

16.4.1.1 **PTO Performance:**

- i) The backup torque is 22.55 %.
- ii) The specific fuel consumption corresponding to maximum power was measured as 267g/kWh against the declaration of 265 g/kWh, which meets the requirement of IS:12207-2008 with regard to tolerance.

16.4.1.2 Drawbar performance test:

During 10 hour drawbar test, the creeping of LHS & RHS rear tyre over the rims was observed as 35 mm & 30 mm respectively, which was considered on higher side. This may be looked into for necessary corrective action.

16.4.1.3 Hydraulic performance test:

The maximum tilt angle of mast from vertical over the full range of lift was i) observed as 5.0 degrees against the minimum requirement of 10 degree as per IS: 12224-1987. This should be looked into for necessary corrective action.

16.4.1.4 **Mechanical Vibration:**

The amplitude of mechanical vibration on various assemblies marked as (*) in Chapter-9 of this test report are on higher side especially at the steering control wheel, left and right foot rest, accelerator lever & brake pedals. This calls for dampening down of vibrations to improve the operational comfort and service life of components.

16.4.1.5 Three point linkage:

The lateral distance from lower hitch point to center line of tractor does not meet the requirements of IS: 4468(Part I)-1997. This should be looked into for necessary corrective action.

16.4.1.6 PTO shaft & its Master shield:

In PTO shaft parameter B doesn't meets the requirement and PTO master shield should be provided as per IS: 12343-1988.

16.4.1.7 **Operator's seat:**

All parameters meets the requirement of IS: 12343-1988. i)

16.4.2 Field performance test:

16.4.2.2 Wet land cultivation (Puddling operation):

No ingress of mud/or water was noticed during puddling operation of the tractor. Hence, It meets the requirements of IS: 11082-1984 (Technical requirements of agricultural tractors for wetland operation). The tractor is suitable for wetland operation (Puddling).

16.6 Maintenance / Service Problems:

No noticeable maintenance/ service problem was observed during the test.

16.7 Recommendation with regard to safety on tractor:

The following requirements, inter alia, may be considered for incorporation on the tractor:

- i) Provision for spark arresting device in exhaust system.
- ii) Provision of safety against accidental start of engine.
- Provision of differential lock. iii)
- Provision of PTO shaft master shield. iv)
- The minimum cautionary notice as per clause 11.2 of IS: 12239 (Part-2)-1999. V)

16.8 Adequacy of Literature supplied with machine:

T-958/1476/2015

- **16.8.1** The following literature was supplied with the tractor for reference during the test.
 - i) Operator's manual (for ACE DI 350 +, DI 450+ & DI 550+tractors)
 - ii) Spare parts catalogue (for ACE DI 350 +, DI 450+ & DI 550+tractors)
 - Work shop Manual (ACE DI 350+ & DI 450+ tractors)
- 16.8.2 The revised literature supplied was found adequate. However, the following points needs to be incorporated in owners/operators manual.
 - Details of all variants along with their features at a glance should be provided in the operator's manual.

ACE DI 350 + TRACTOR - Commercial (Initial)

16.8.3 The literatures should also be brought out in national as well as other regional languages for the guidance of users and service personnel.
